

ENERGIZING THE NATION

A leading producer of natural resources, Dumas has booming oil, natural gas and wind industries.

COMMODITIES

With its abundance of natural resources, Dumas is one of the nation's leading locations for oil, natural gas, petrochemicals, and wind energy. It was once the world leader in helium production.

Companies like Chesapeake, Conoco-Phillips, Apache and Pioneer Resources are located here for oil and natural gas. Refining the abundance of locally drilled oil, Valero's McKee Refinery produces a variety of fuels and asphalt. One of the most well connected oil refinery plants in the Valero system, the McKee Refinery has a total throughput capacity of up to 195,000 barrels a day.

Class 4+ wind speeds measuring 9.4 meters per second at 80 meters

These are the numbers identified through various MET towers installed in Moore County. These high-powered winds, coupled with multiple wind transmission lines make Dumas an ideal location for companies such as Apex Energy and Exelon Energy to capture and sell energy on to the ERCOT Grid. An estimated 1,000 megawatts of new wind energy is being developed in Moore County today.

ENERGY IS A LEADING EXPORT FOR DUMAS
